

TileFabs as Snippets

You can use TileFabs to create 'snippets' of tiles which can be painted using Painter.

In the Layout demo's DesignTileFabs folder you can see a few prebuilt buildings that can be dropped into any tilemap with matching Tilemap names.

[Snippets.png](#)

These were created directly from the Scene View using a Grid Selection. Note that all tilemap layers with any tiles or (parented) prefabs are archived. You'll notice that the three TileFabs in this folder all have three bundles.

Think of it as a template or a sort-of-prefab.
